

Applicant Initiated Interview Request Form

Application No.: 10/804,758 First Named Applicant: Faller, Walter S.
 Examiner: Michael Zanelli Art Unit: _____ Status of Application: _____

Tentative Participants:
 (1) Mark Brown (2) Michael Zanelli
 (3) _____ (4) _____

Proposed Date of Interview: 02/20/2008 OR 02/27/2008 Proposed Time: 2:00 (AM/PM)
 Proposed Time: 2:00 PM

Type of Interview Requested:
 (1) ☐ Telephonic (2) ☒ Personal (3) ☐ Video Conference

Exhibit To Be Shown or Demonstrated: ☐ YES ☒ NO

If yes, provide brief description: _____

Issues To Be Discussed

(2) _____	_____	_____	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
(3) _____	_____	_____	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
(4) _____	_____	_____	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<input type="checkbox"/> Continuation Sheet Attached					

Brief Description of Arguments to be Presented:

Proposed amendments to claim 14 overcome Section 112 rejections.
Identification of supporting disclosure in specification.

An interview was conducted on the above-identified application on 2/19/08.
 NOTE: This form should be completed by applicant and submitted to the examiner in advance of the interview (see MPEP § 713.01).

This application will not be delayed from issue because of applicant's failure to submit a written record of this interview. Therefore, applicant is advised to file a statement of the substance of this interview (37 CFR 1.133(b)) as soon as possible.

This collection of information is required by 37 CFR 1.133. The information is required to obtain or retain a benefit by the public which is in the line of the USPTO to process an application. Confidentiality is governed by 35 USC 42 and 37 CFR 1.11 and 1.14. This collection is estimated to take 15 minutes to complete on the amount of time you require to complete this form and/or responses for reduction of this material, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1480, Alexandria, VA 22313-1480. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1480, Alexandria, VA 22313-1480.

For more information on this form, call 1-800-PTO-0199 and select option 2.

DRAFT CLAIM — PLEASE DO NOT ENTER

Satellite Position and Heading Sensor for Vehicle Steering Control

Application No. 10/804,758

2/13/08

14. (currently amended) A sensor system for controlling a vehicle steering system, which sensor system comprises:

a global navigation satellite sensor (GNSS) attitude subsystem including a receiver and multiple antennas connected to said receiver at a fixed spacing, said

GNSS attitude subsystem computing ~~reference vehicle~~ attitude angles;

a yaw gyroscope connected to said GNSS attitude subsystem and configured to derive and provide outputs including a yaw angle and a yaw angle rate of change;

~~said GNSS attitude subsystem including a function for calibrating~~ reducing bias and scale factor ~~drift~~ errors in the yaw gyroscope using said ~~reference vehicle~~ attitude angles; and

a steering control subsystem connected to ~~said yaw gyroscope and said GNSS~~ attitude subsystem and using said yaw angle and yaw angle rate of change outputs from said yaw gyroscope for computing and outputting steering control commands to the vehicle steering system from the current position and heading to the desired position and heading; and

a function for automatically calibrating said steering control commands using GNSS-derived vehicle position.

Application Number 10/804,758
February 13, 2008

Overcoming 35 U.S.C. § 112 (1) objection:

GNSS attitude subsystem for computing reference attitude angles and a function for calibrating bias and scale factor errors in a yaw gyroscope using computed reference angles not clearly described in original application.

Claim 14 (As Currently Amended)	Original Specification Support
GNSS attitude subsystem computing vehicle attitude	[0017] ... The sensor system utilizes a plurality of GPS carrier phase differenced antennas to derive attitude information.
A function for reducing bias and drift errors in the yaw gyroscope using said vehicle attitude	[0020] Another benefit is that achieved by incorporating a GPS-based heading sensor is the elimination or reduction of drift and biases resultant from a gyro-only or other inertial sensor approach. ...
A function for automatically calibrating said steering control commands using GNSS-derived vehicle position	[0041] ... The sensor system 20 measures response of the vehicle 10 as depicted at process block 350 and calculates the response times and characteristics for the vehicle. For example, a selected command is applied and the proportionality of the turn measured given the selected change in steering. Turning to process block 360, the responses of the vehicle are then used to calibrate the control commands applying a modified control command to achieve a desired response. It will be appreciated that such an auto-calibration feature would possibly be limited by constraints of the

	vehicle to avoid excess stress or damage as depicted at 370. Method flowchart Fig. 6 shows calibration step 360.
--	---

Overcoming 35 U.S.C. § 112 (2) objection:

Claim 14 is amended to state that the steering control subsystem is connected to the yaw gyroscope. The yaw gyroscope output can thus be used as claimed.
